

Layered photocatalytic (PCO) surface area totals over 200 square inches

A patented titanium dioxide + silver/zinc formulation coats the PCO surfaces to actively break down odors, VOCs and airborne chemicals.

Germicidal silver and zinc ions are released in the PCO process to enhance pathogen destruction in the air and on surfaces.

The 4X-Plasma Generator freshens the air in the same way a thunderstorm freshens outdoor air. The ions also electrically charge microscopic fine dust particulates causing them to gather into filterable clusters.

Photon Clarifier™

Patented design adjusts active PCO level without affecting germicidal UV intensity

High Intensity Germicidal Dual-Spectrum UV lamp

## • Solaris IAQ System Control Center Interface

Plug-in connections for Solaris IAQ Control Center (as shown in diagram at left)

*Works only with Solaris IAQ Control Center power module.*
